SEAL IT TIGHT! SEAL IT EASY! SEAL IT FAST!

INTRODUCING: The Seal-R™ Ring and the Seal-R™ Lid

The ideal way to reduce your installation labor expense. It saves time and labor on later access needs, too!

The **Seal-R™ Ring** is a lightweight, polyethylene sealing ring for septic tanks. Installation of the **Seal-R™ Ring** creates a water-tight seal between the tank top and riser maintenance pipe. The ring and riser pipe can be installed in minutes using a polyurethane foam sealant. The ring forms an ideal barrier to groundwater thus preventing leaks into the septic tank. Using corrugated dual-wall plastic culvert pipe which allows you to select the correct height of riser without using precut sections that may or may not fit your situation.

The **Seal-R™ Lid** is the ideal cover for plastic dual-wall riser pipe. It is GREEN in color, sturdy, lightweight, and installs quickly using 4" stainless steel lag screws (included w/cover) in pre-formed holes. The **Seal-R™ Lid** has a gasket to prevent groundwater entry. A **Seal-R™ Lid** will allow rapid access for servicing at a later date without back-breaking lifting.
