EZ-PULLER

Pre-Installation

Examine the components carefully to ensure all pieces are present and that no damage has occurred during shipping. Report damaged items immediately to the shipping carrier. In the box there should be: One (1) 1/2" by 36" long pipe nipple with rubber safety cap, One (1) 1/8" by 8" long pipe nipple with two safety caps, One (1) 3/4" x 1/2" reducing elbow & One (1) Safety Hook Assembly

Ez-Puller Assembly

Screw the 1/2" by 36" long pipe nipple into the 1/2" threads of the reducing elbow. Once you have finished tightening, the 3/4" hole on the reducing elbow needs to be 90 degrees to the holes in the 36" long pipe nipple.

Remove one of the safety caps from the 1/8" by 8" long pipe nipple.

Insert the end without the safety cap into the hole in the Safety Hook Assembly.

Tighten the Safety Hook Assembly onto the 3/4" hole of the reducing elbow using the 1/8" by 8" long pipe nipple. The slot in the Safety Hook Assembly must be facing upward once you have finished tightening.

Remove the 1/8" by 8" long pipe nipple from the Safety Hook Assembly and insert it into one of the holes in the 1/2" by 36" long pipe nipple and place the safety cap back on it.

Thank You For Purchasing The EZ-Puller

We at Webtrol are constantly working on new products to make your job easier, while making your systems more efficient, reliable and affordable.

Your opinion means a lot to us, so please let us know what you think about the EZ-Puller Safety Hook Assembly.
